

A. SETUP

1. Set up your Powersim runtime player by double clicking on the extractable zip file, **PsRun.exe** and following the instructions on the screen.
2. At the required point, enter the following serial number: **E-03008-062**

B. START MODEL

1. Start the Powersim Player, and from there, open the model and any associated Excel files.

C. RUNNING THE MODEL

1. To run the model using all the defaults: Click the model **run** button (on the control bar at the top of the screen). The model takes about 2 seconds to run on a 200 MHz computer.
2. To run model changing input constants via the slider bars or buttons:
 - a. Start the model run by clicking on the model **run step** button: **>|**
 - b. The model will initialize and then pause for you to make changes. At the pause, you can adjust the slider bars or click on any of the buttons in the boxes.
 - c. When you have finished making changes, you can click on the **continue** button: **=** to finish the run, or repeatedly on the **run step** button: **>|** to step through the model step by step.
 - d. You can move around the model and zoom in and out, but you cannot make changes to the model.
